

● AMPLIFYING TIP SIGNAL GENERATOR

● AMPLIFYING TIP

Characteristics

- The signal detector is designed to identify and track wires and cables within a group without damaging the insulation
- Works in conjunction with a signal generator, for identification of conductors
- Volume Control (0 to 9) to increase sensitivity and fit to the surrounding environment
- Red spring button ON / OFF, not protruding, to avoid always being pressed, and prevent the battery to easily drain itself
- Powered by a 9 volt battery, with an approximate duration of 100 hours
- With a headphone jack

● SIGNAL GENERATOR

Characteristics

- Supplied with crocodile type tips and RJ11 plug with 4 contacts for each telephone socket
- A 3 position switch controls the operation modes, plus a tricolor LED to indicate the polarity of the lines, continuity and tension tests
- A switch inside the battery compartment to select tones, choosing a single or double tone
- Caution: Do not connect to an AC circuit that exceeds 24 volts in this mode
